Automated Lab Validation is a Journey. Are You Ready?

Anna Pedale - NI

Principal Solution Marketing Manager

David McDaniel – Infinitum

Senior Manager, Test & Integration

Agenda

- 1 Traditional Lab Approach
- 2 Modernizing the Lab is a Critical Strategic Differentiator
- 3 NI Test Capabilities for Validation Applications
- 4 Infinitium: How They Modernize Their Validation Laboratory

Your Current Validation Approach Isn't Helping You

TRADITIONAL LAB APPROACH

- Inconsistent Data Storage Practices
- Manual Asset Management
- Inconsistent Software Approach
- Too Many Instrument Models
- Limited Automation
- Inconsistent Measurement Methodology

CHALLENGES

- Limited Product Insight
- High Engineering Cost
- Slower Development Time

Traditional Lab Validation Architecture

Approaches range from manual to DIY measurement frameworks and sequencers

Manual Test Bench

100's of Test Instrument Makes & Models

Manual Data Storage

Other Manual Test Bench

Common Issues

Time Wasted for Duplicate Software Development

Disparate Instruments Complicate Correlation

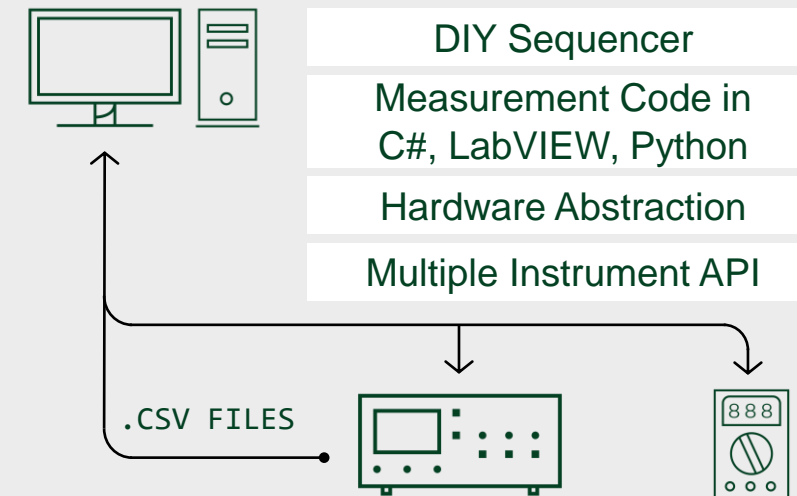

Lack of Automation Slows Measurement Time

Difficulty Finding & Utilizing Test Data

Significant Time Maintaining Test Systems

Difficulty Hiring Broad Range of Hardware & Software Skills

Automated Test Bench

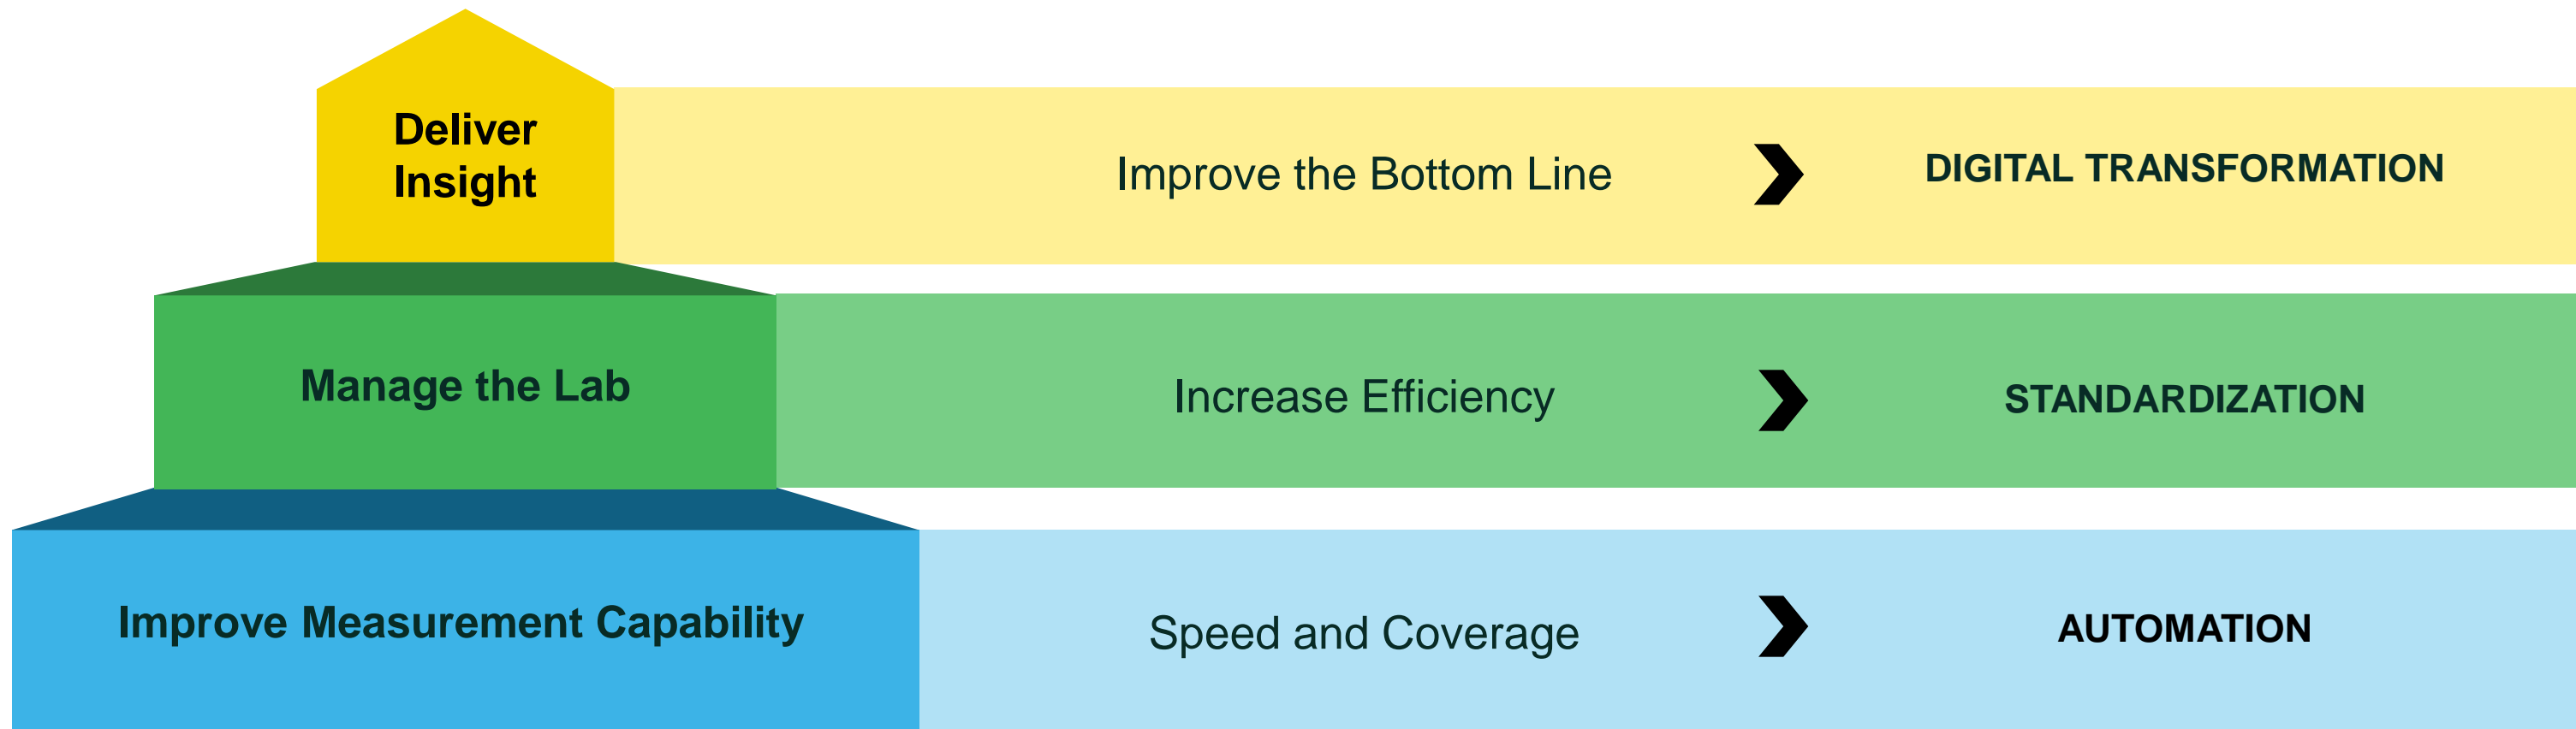

Other Automated Test Bench

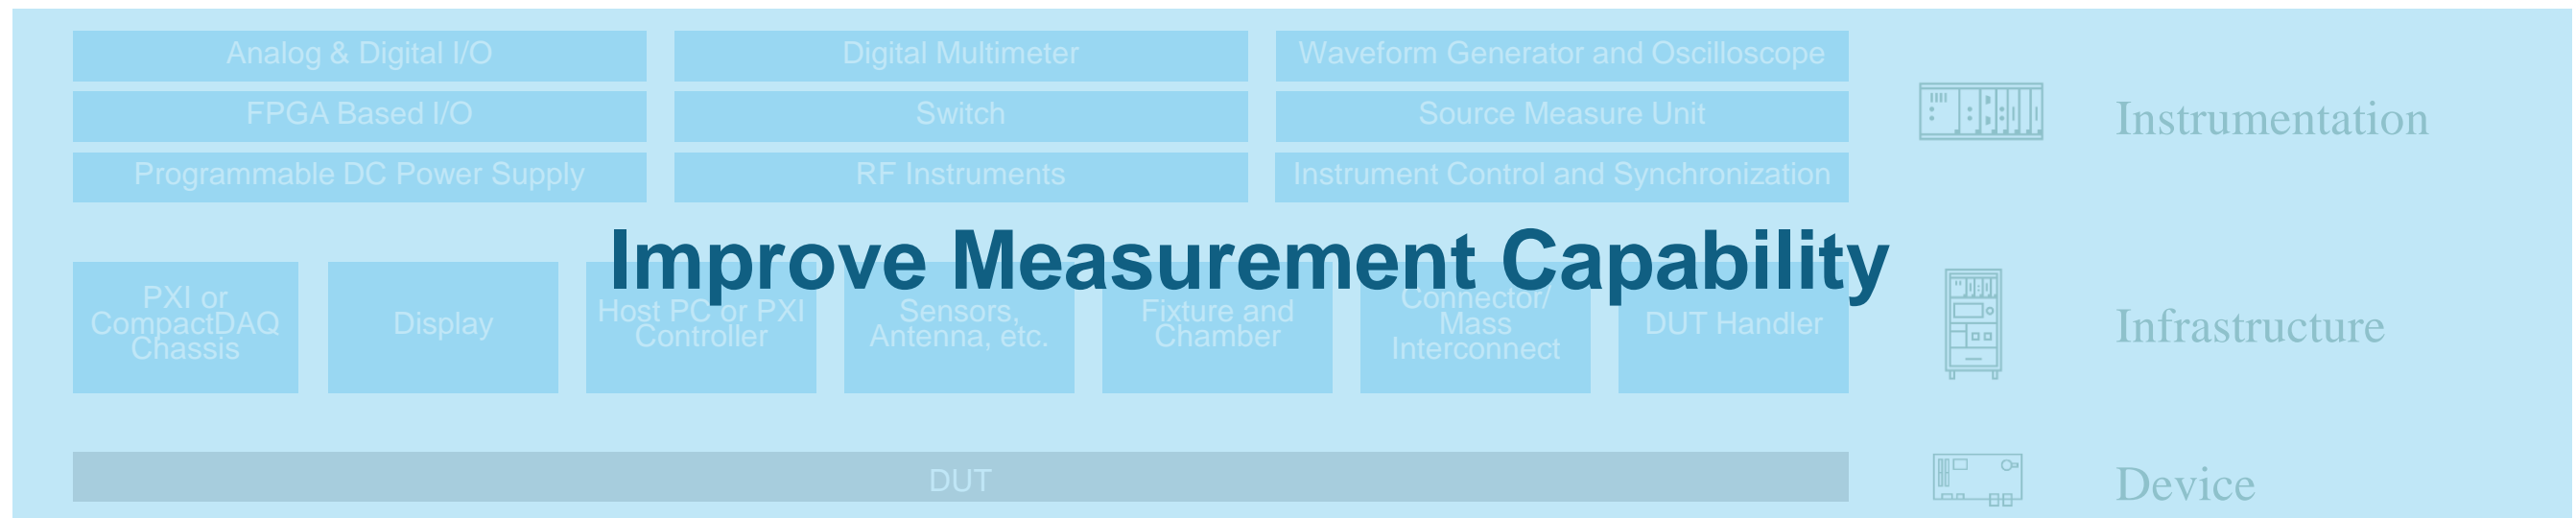

Modernizing the Lab is a Critical Strategic Differentiator

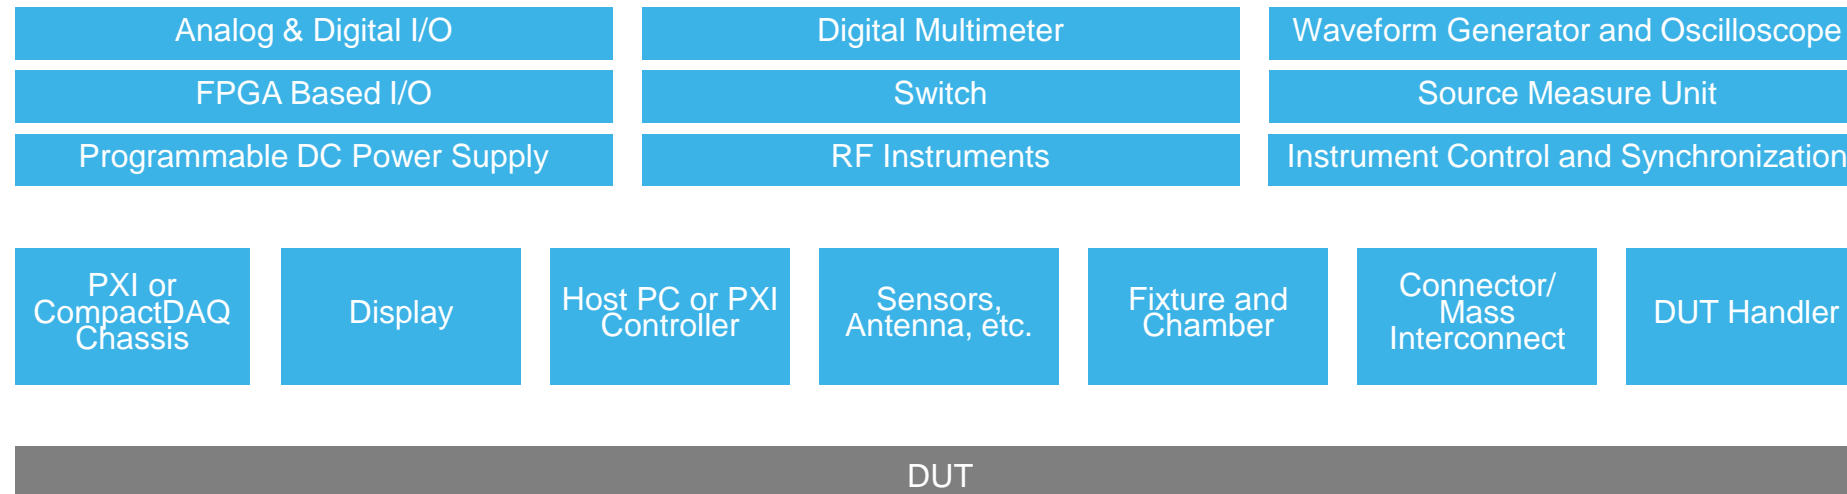

The Value of Test Is More Than Just “Performing Measurements”

Standardize Test and Modernize Your Lab

Standardize Test and Modernize Your Lab

Standardize Test and Modernize Your Lab

Instrumentation

Infrastructure

Device

Signal Type	Channels	Measurement Types	Sampling Rate Max
Analog Input			
Voltage	4, 8, 16, 32	±200mV, ±500mV, ±1V, ±5V, ±10V, ±60V, 300Vrms, 400Vrms, 800Vrms	1 MS/s/ch
Current	4, 8, 16	±20mA, 5Arms, 20Arms, 50Arms	200 kS/s
Universal	2, 4	V, mA, TC, RTD, strain, IEPE, W	51.2 kS/s/ch
Thermocouple	4, 8, 16	J, K, T, E, N, B, R, S types	95 S/s/ch
RTD	4, 8	100W, 1000W	100 S/s/ch
Strain/Bridge	4, 8	¼, ½, full bridge (120W or 350W)	50 kS/s/ch
Sound & Vibration	2, 3, 4, 8	3 Vrms, ±5V, ±30V	102.4 kS/s/ch
Analog Output			
Voltage	2, 4, 16	3 Vrms, ±10V	100 kS/s/ch
Current	4, 8	0 mA to 20mA	100 kS/s/ch
Digital I/O			
Input	4, 8, 16, 32	LVTTL, 5VTTL, 12V, 24V, 30V, 250 VDC/VAC, sinking and sourcing	55 ns
Output	4, 8, 16, 32	LVTTL, 5VTTL, 12V, 24V, 60V, programmable; sinking & sourcing	55 ns
Input / Output	4, 8, 16, 32	LVTTL, 5VTTL, 12V, 24V	55 ns
Relays	4, 8	30VDC, 60VDC, 250VAC; SPST & SS	1 op/s
Bus			
CAN	1, 2	HS/FD, LS/FT CAN	5 Mb/s
LIN	1, 2	LIN	20kb/s
Counter/Timer			
Counter	8 counters	0V-5V diff, 0-24V single-ended	1 Mhz

CompactDAQ Product Family

Ensure that you never have to compromise the quality, quantity or mix of your measurement

Hit your deadlines by completing your projects faster and more efficiently

Maximize component reuse despite new or evolving requirements

PXI Platform

DAQ and Control

Multifunction I/O

Counter/Timer/Clock

Digital I/O

Analog Input/Output

Vision and Motion

FPGA/Reconfigurable I/O

Instrumentation

Oscilloscopes

High-Speed Digital I/O

DMM and SMU

Signal Generators

Switching

RF Analyzers and Generators

Interfaces

GPIB, USB, LAN

RS232/RS485

CAN, LIN, DeviceNet

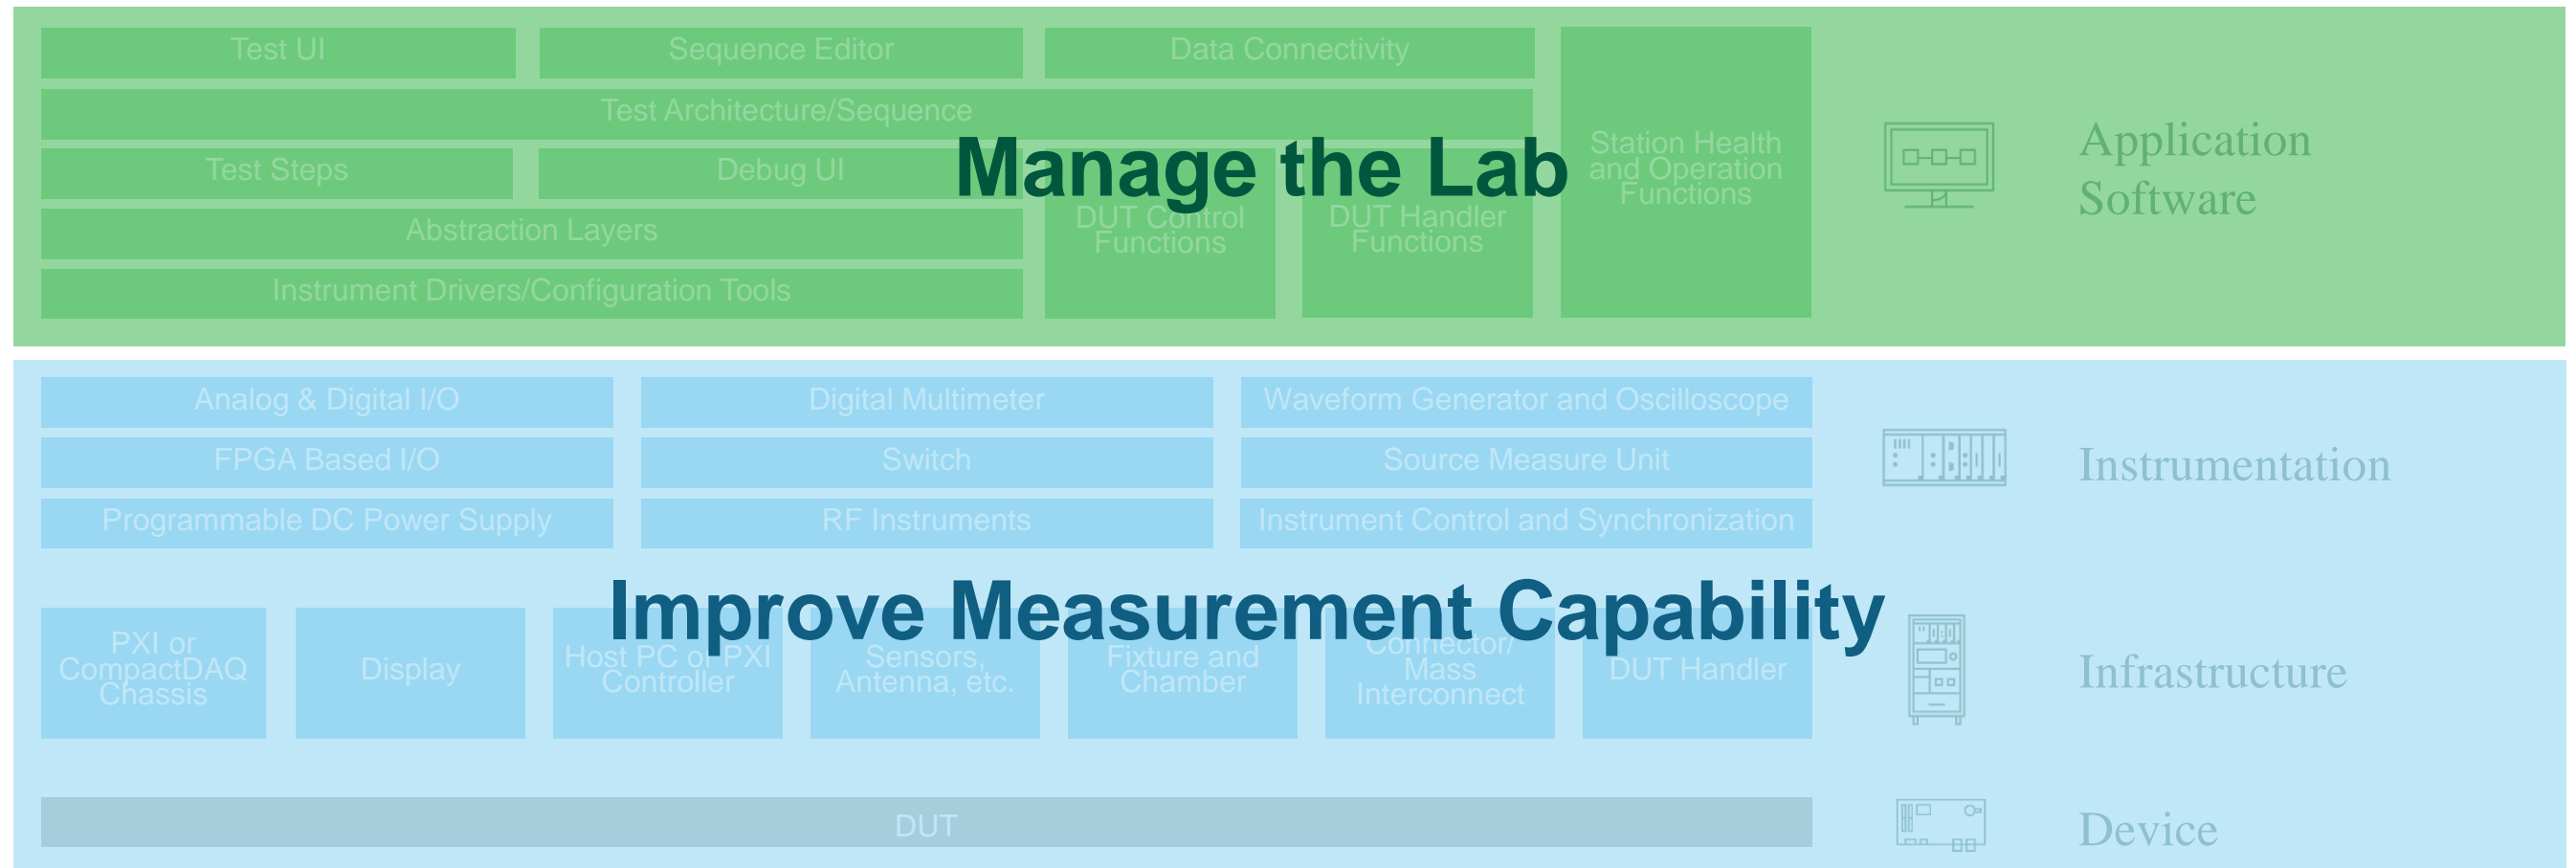

SCSI, Ethernet

VXI/VME

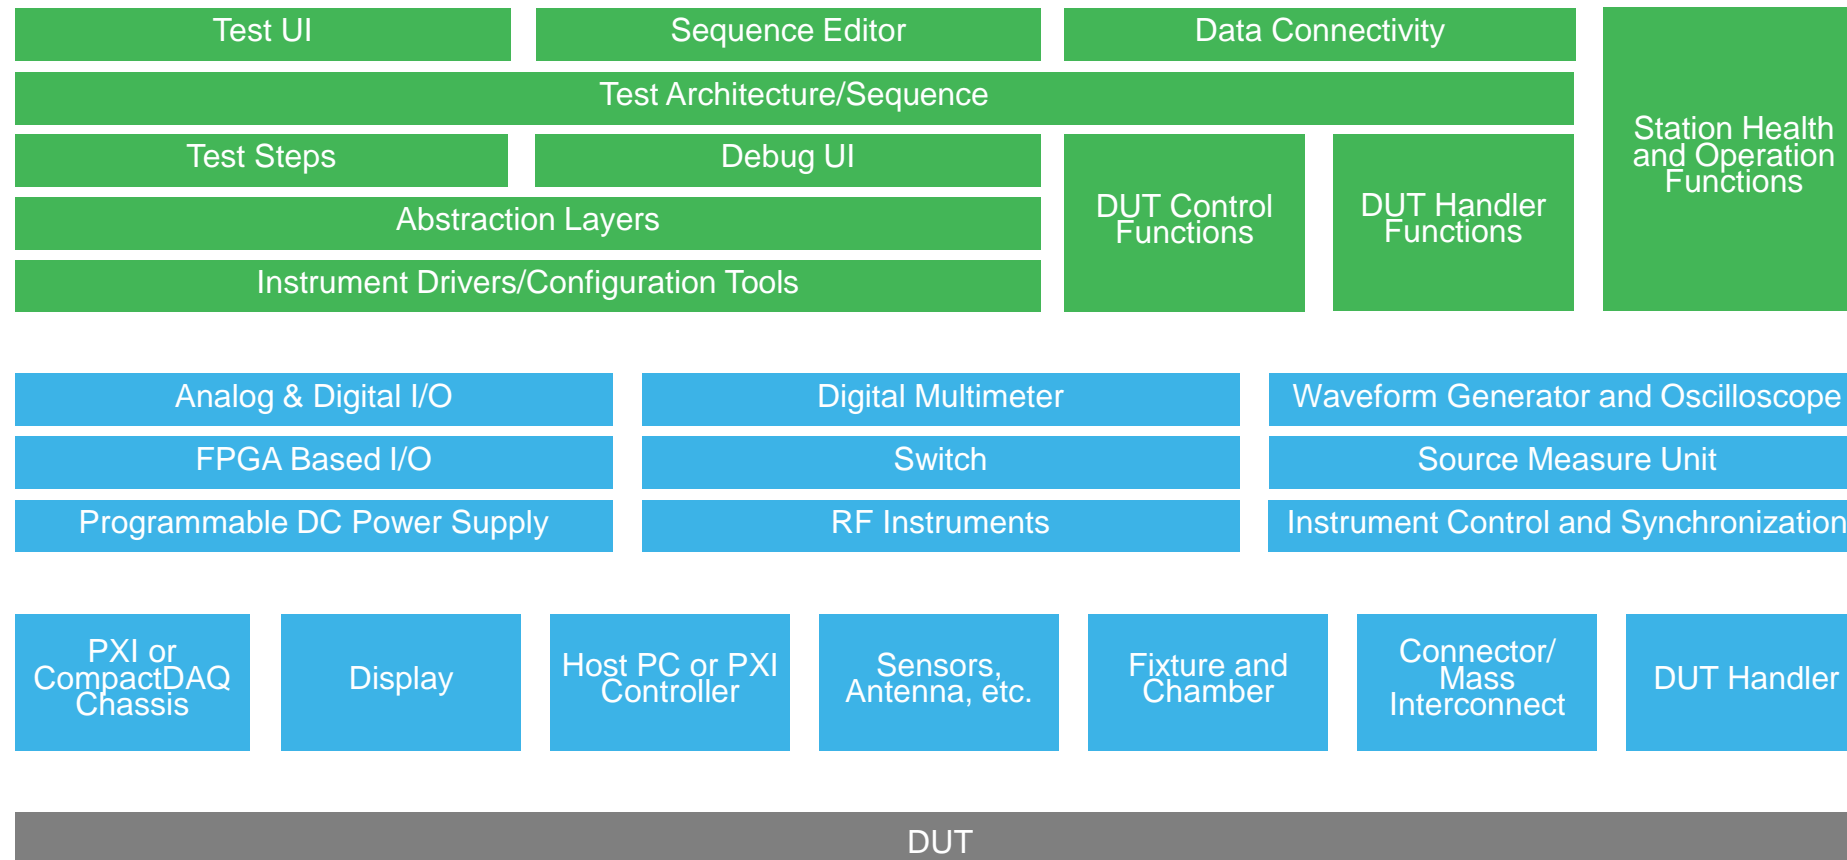

Boundary Scan/JTAG

Standardize Test and Modernize Your Lab

Standardize Test and Modernize Your Lab

Application Software

Instrumentation

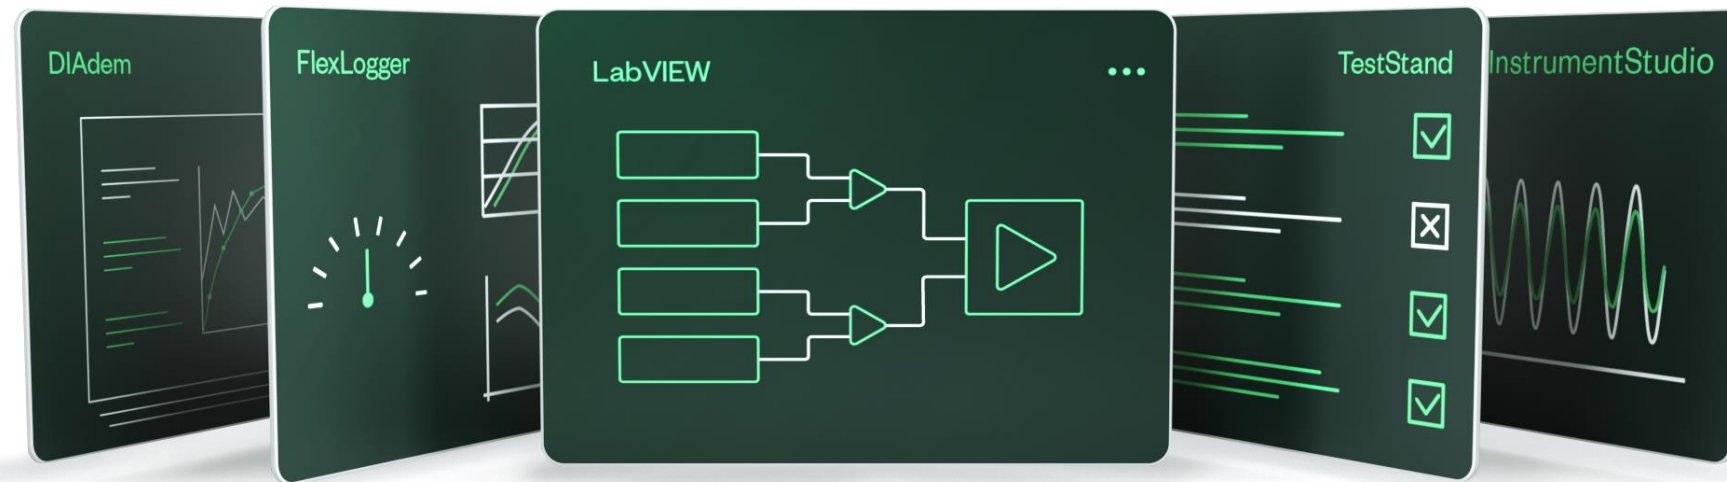

Infrastructure

Device

LabVIEW+ Suite

A connected suite of software that makes you more productive across your test workflow

Quick configuration and high-level development of common tasks

Comprehensive development environment for custom tasks

Connectivity across tasks and with other engineers

Open integration to 3rd party software and instruments

LabVIEW Plus More NI Software

With time and effort, LabVIEW can do anything – but it doesn't need to. The LabVIEW+ Suite brings together NI test software that saves engineers time by optimizing every task in their workflow.

Performing Measurement

FlexLogger

Interactive data acquisition software to get data faster

InstrumentStudio

Interactive measurement and monitoring software

Data Analysis

DIAdem

A data analytics software for visualizing and analyzing data and creating reports

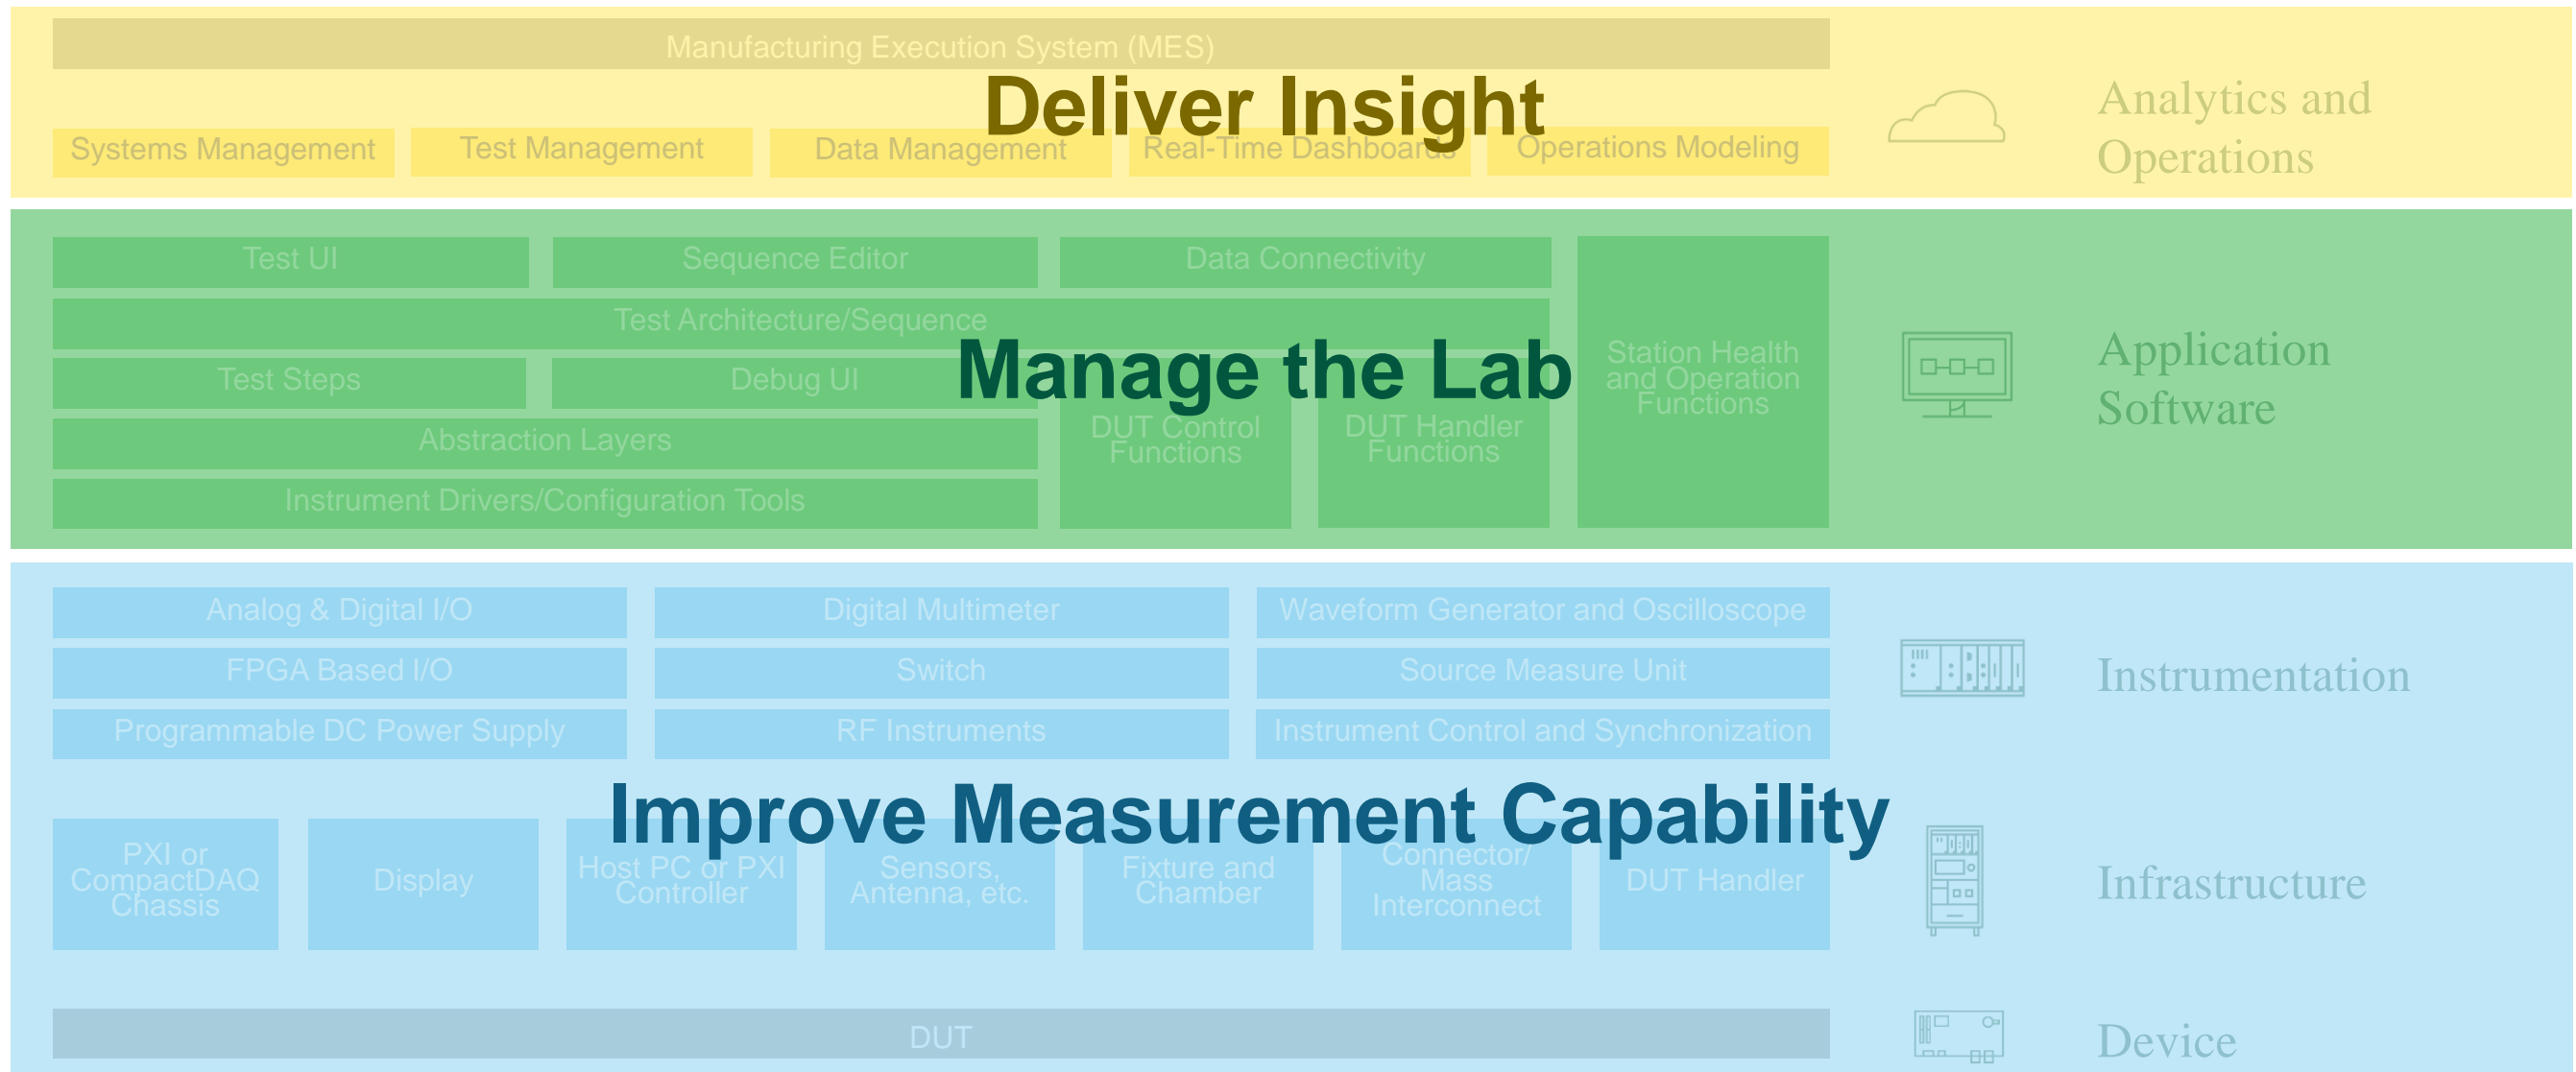

Test Sequencing

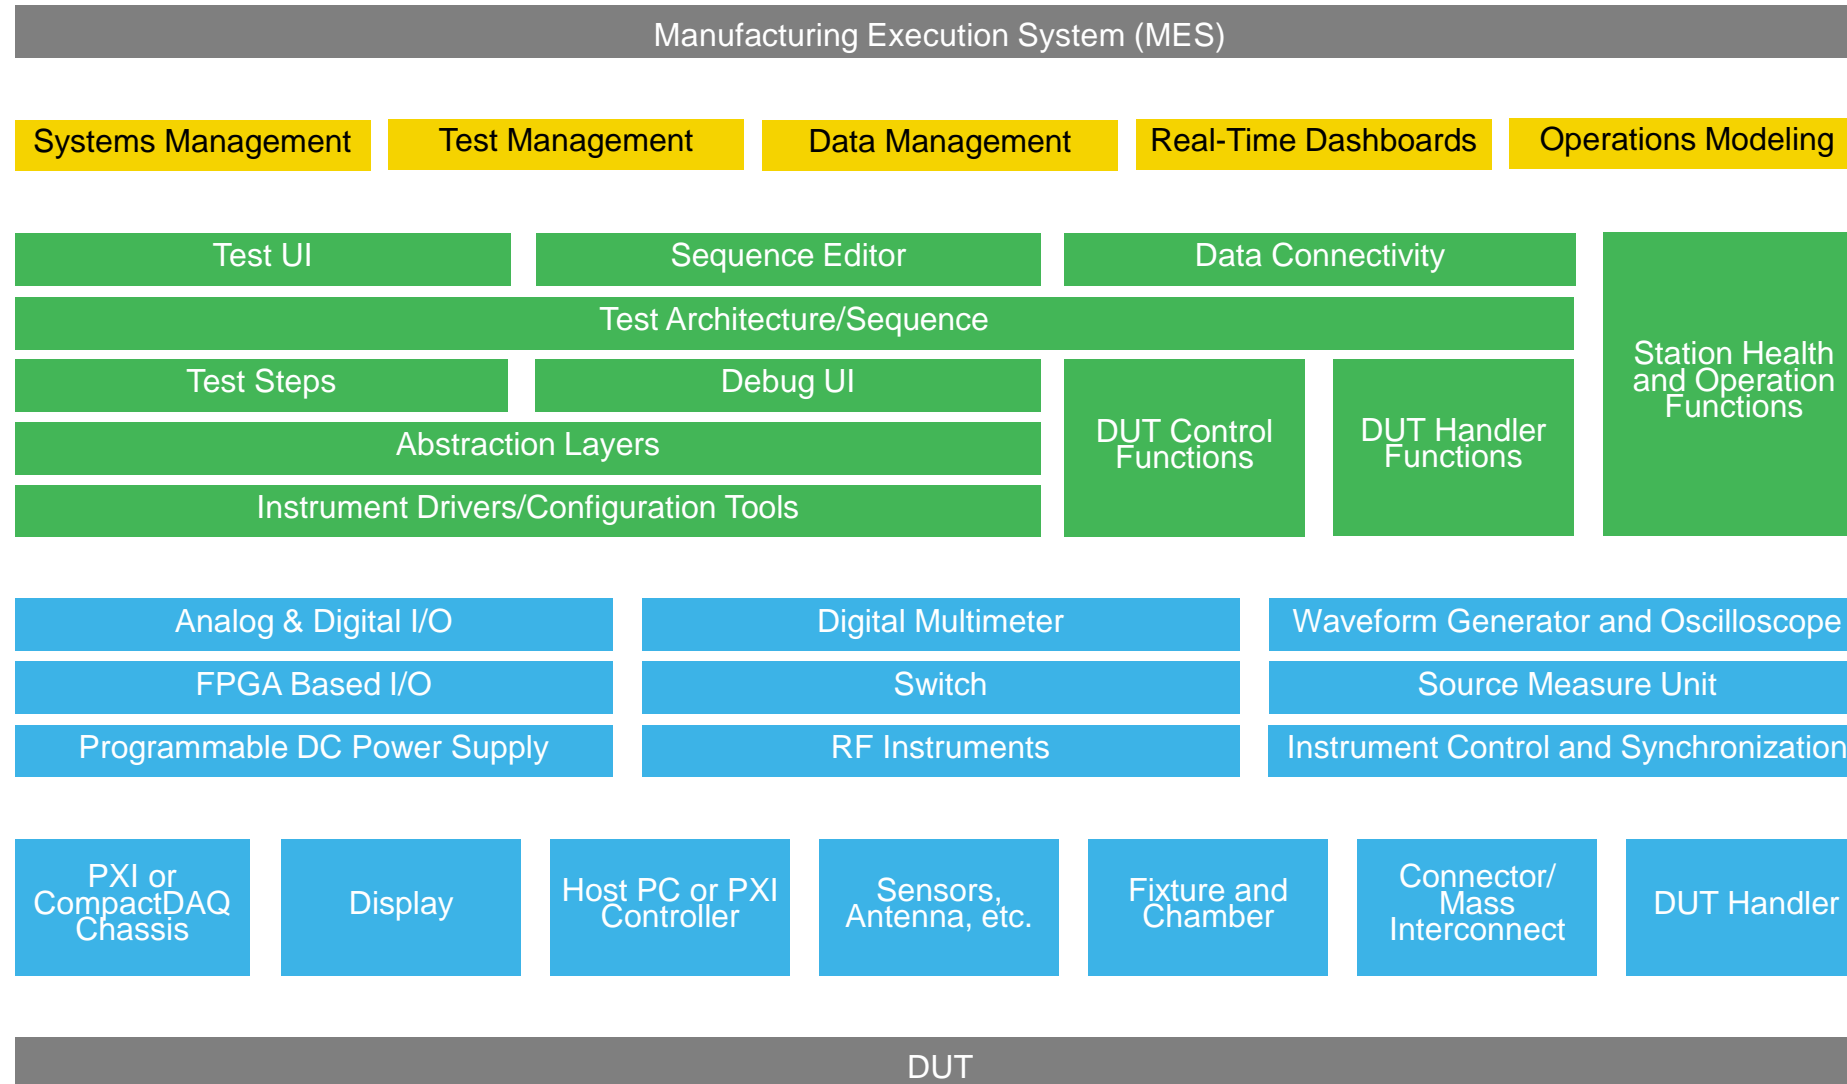

TestStand

A test executive software for building validation and production test systems

Standardize Test and Modernize Your Lab

Standardize Test and Modernize Your Lab

Analytics and Operations

Application Software

Instrumentation

Infrastructure

Device

Streamline lab operations and amplify engineering insights in an integrated, scalable, enterprise solution.

Manage Systems and Assets

Manage and install software for your entire test fleet, monitor test system health, and manage and track NI and 3rd Party instrument utilization

Monitor and Analyze Parametric Tests

Collect and view test results, files and parametric data; filter data for additional insights and track KPIs with dashboards and ad-hoc analysis

Plan Tests and Work Orders

Track incoming test requests, define test requirements, schedule, deploy, and remotely execute tests

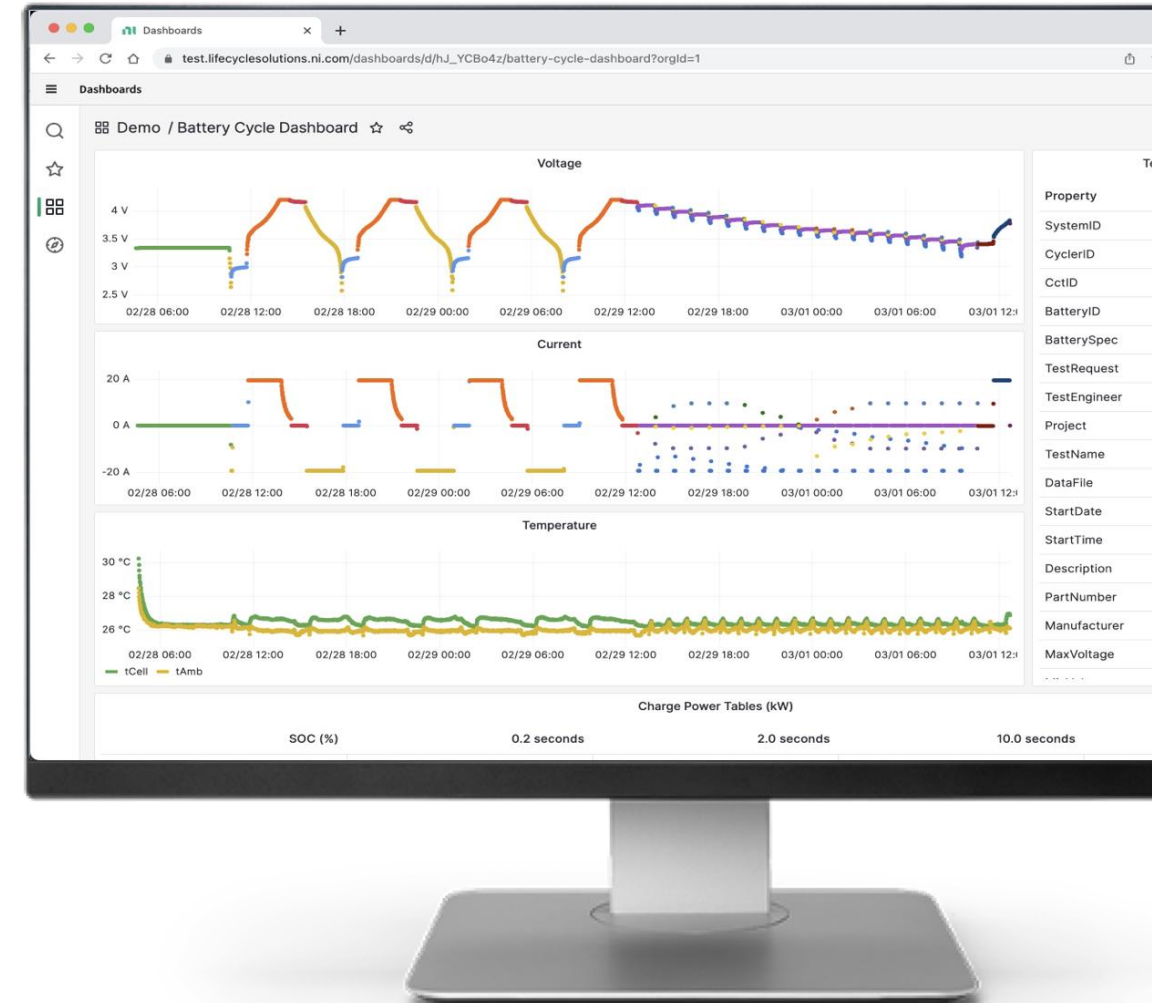

Track Product Specification Compliance

Elaborate requirements into engineering specifications to drive test consistency, quickly discover product issues, and track test progress

Automate Analysis and Reporting

Fully integrated Jupyter Notebook development environment to create Python scripts to extract, transform, and analyze data

Connect SystemLink

With **TestStand** to complete the loop from specifications to measurement

With **LabVIEW** to centrally manage test data and test system status

With **DIAdem** for further analysis and powerful report generation

Software is Critical for the Modern Lab.

TRADITIONAL LAB APPROACH

- Slower measurements
- Large footprint
- Difficult to synchronize
- Inconsistent software APIs
- Inefficient measurement correlation
- Inconsistent data management

MODERN LAB APPROACH

- Faster measurements
- Small footprint
- Native synchronization
- Consistent software experience
- Correlation from lab to production
- Consistent and speedy data access

- Software frameworks
- Modular instrumentation
- Automated measurements
- Code re-use across groups and sites
- Fast, data-driven decisions

Embedded Software Test

Why NI

Software

Develop, or Don't.
Free (Python, C/C#)
Opensource data formats
SW for test engineers that scales from free to LabVIEW+
Data management/analysis software/Model Integration

Performance

Speed
Synchronization
Bandwidth
Advanced Computing

Quality

If the datasheet says it, the device can do it
Reliable design/build so things work as expected
A broad range of I/O to meet test requirements and advanced technology

Future Proof

Keep up with change
Open ecosystem of SW
Large catalog of hardware that run off of relatively few drivers
Modular systems to expand/adjust hardware measurements

The Next Generation of Lab Validation

David McDaniel

Senior Manager – Test & Integration

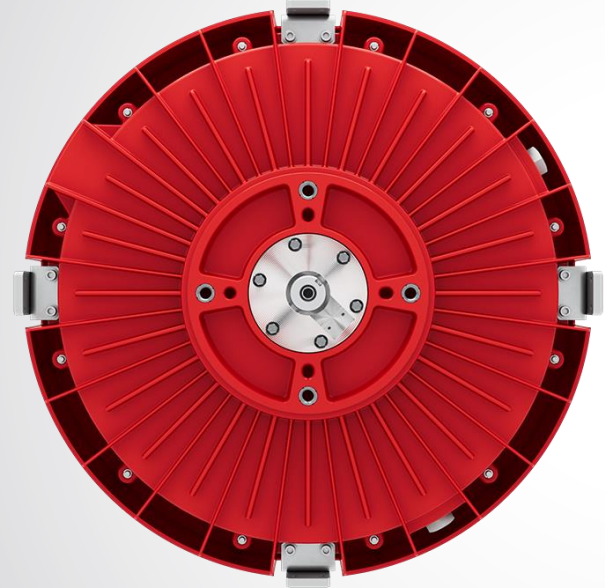

dmcdaniel@goinfinitum.com

Infinitum: to infinity; endless; without limit

Our vision is to go beyond expectations by creating a more efficient motor with less resources that is better for people and the planet.

A next generation motor
66% Less Copper
50% Smaller/Lighter
10% Less Energy
No Iron Core | Circular Design

Sustainable modular design
for serviceability and
remanufacturing

Over **\$345m** raised to design, develop and scale production of a revolutionary integrated motor and inverter.

Motor and Drive in a single compact design.

Traditional Measurement Approach

- ✓ Quick Startup
- ✓ Fast Results
- ✓ Manual Measurements
- ✓ Easy Setup
- ✓ Push-button Hardware

- ✗ Not Scalable
- ✗ Inconsistent Results
- ✗ Labor Intensive
- ✗ Not Standardized
- ✗ Human Error

Infinitem's Automated Test Journey

In the beginning:

- Single test stand for motor development.
- One lab engineer for all software and hardware development.
- Developed test solutions in parallel with product development testing.
- Manual measurements and reported data in spreadsheets and documents.
- Data inconsistencies.

On our Way:

- 30 Test stands across multiple development sites and factories.
- Multiple standardized platforms of product test.
- Shared software, test code and sequences.
- Consistent, repeatable, logged data and reporting structure.
- Multiple developers, and lab support staff.

How It Started

How It's Going

How We Got Here

- **Define Test Requirements**
- **Select Automation Tools**
- **Design Test Architecture**
- **Develop Test Software**
- **Implement Test Sequences**
- **Integrate Hardware and Software**
- **Validate and Verify**
- **Continuously Improve**

Define a Platform to Meet your Requirements

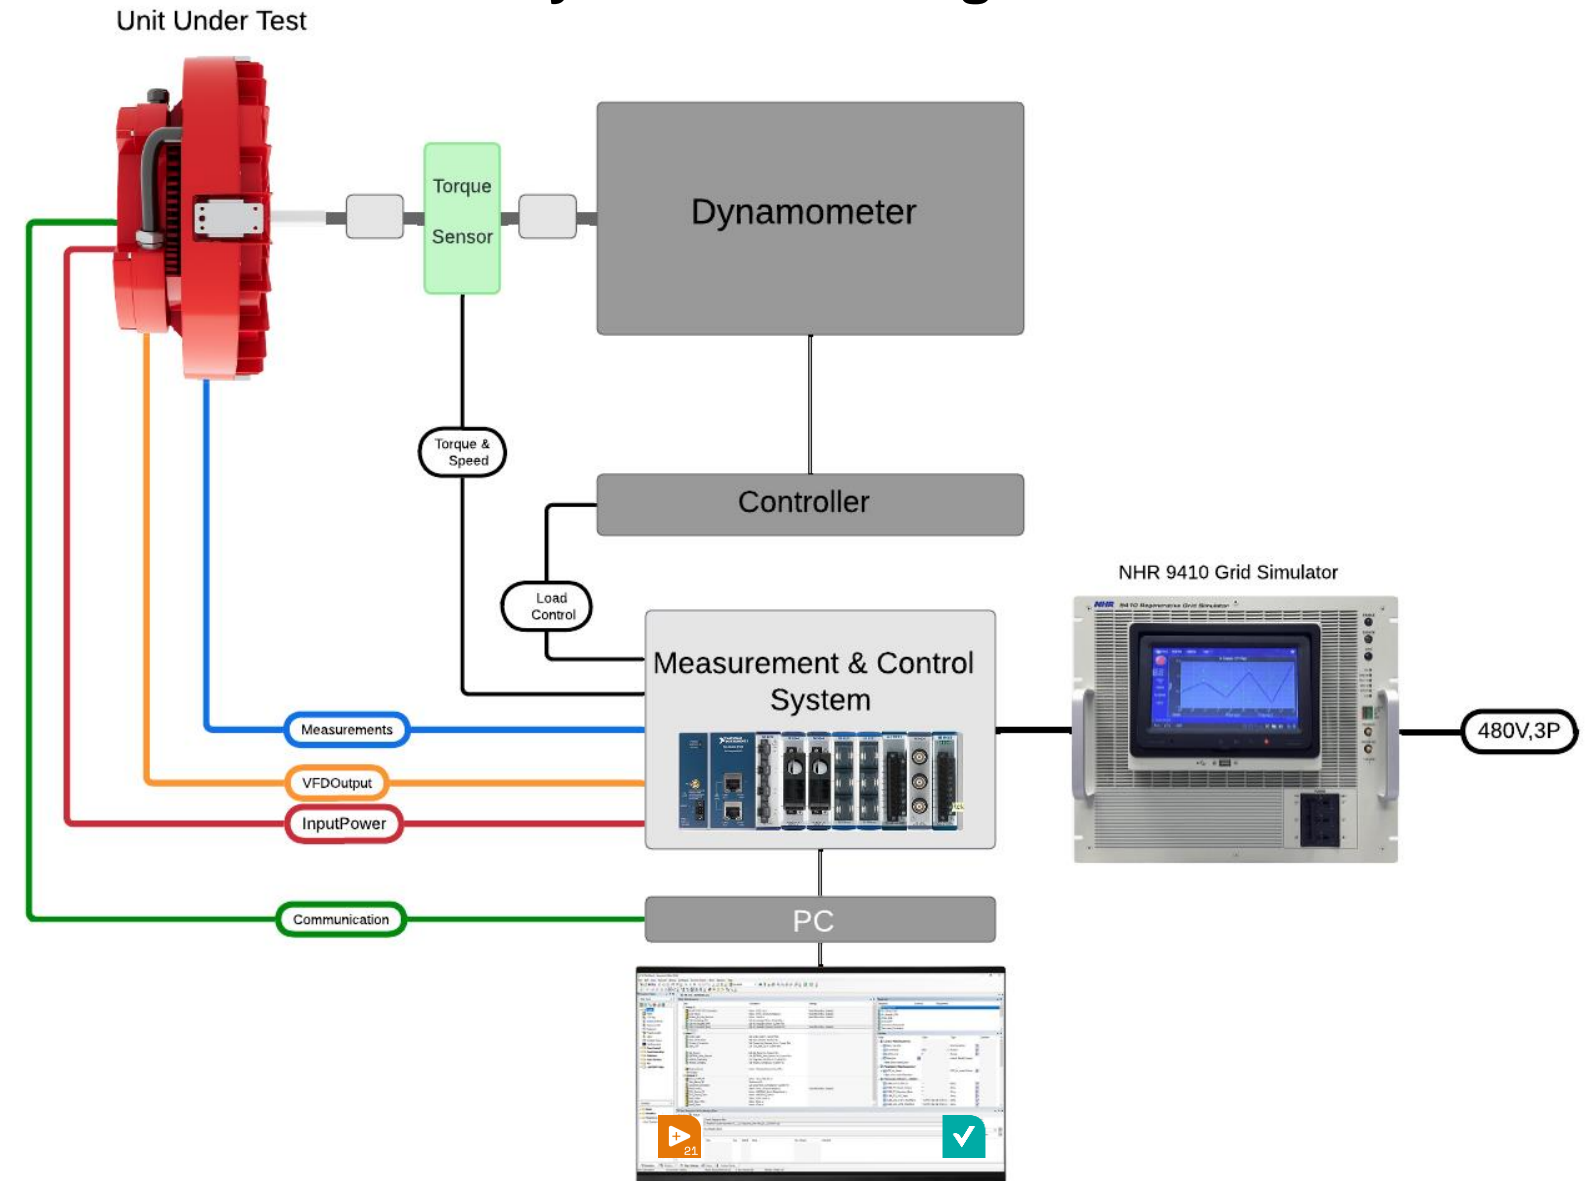

Software Requirements:

Measurement Capability:

- Voltage (600V) (NI 9244)
- Current (50A) (NI 9247)
- Temperature (NI 9210, 9212, 9216, 9219)
- Accelerometer (NI 9230, 9234)
- Microphone (NI 9230, 9234)
- Digital I/O (NI 94xx Series)
- Analog I/O (NI 9223, 9229, 9269)
- NI 9189 Ethernet Chassis

In the Factory

Lessons Learned Along the Way

- **Thorough Planning is Essential**
- **Invest in Training and Documentation**
- **Continuous Improvement is Key**
- **Collaboration is Vital**
- **Start Small and Scale Gradually**
- **Address Challenges Proactively**
